The Female Offender – Selected Statistics

Report of the National Advisory Committee
on the Female Offender

Solicitor General
Canada

Soliciteur général
Canada

The following is a preliminary report which was initially prepared as a Statistical Appendix to the Report of the National Advisory Committee on the Female Offender. Due to a shortage of time and difficulties acquiring the appropriate data, it is in very rough form and is presented here merely to provide a general idea of what is available.

It is anticipated that a revised version of this report will be available by late Spring 1977 and will be provided upon request.

In addition, it is anticipated that this document will, from time to time, be brought up-to-date in an effort to reflect both the annual numerical changes as well as to identify emerging trends and patterns in female criminality.

S. G. Adams
Statistics Division
Solicitor General Canada

Spring 1977

- The 1974 statistics referred to in Tables 1, 2 were not available to the Committee at the time their report was written; they were included by the Department of the Solicitor General subsequent to the filing of the report.

Foreword

In Canada, statistics are collected at nearly all stages of the criminal justice process in order to meet the requirements of public information, administrative assistance and research inquiry. The data usually pertain to some particular activity of an official agency, such that police statistics generally identify the number of crimes reported and persons charged; statistics reported by the courts relate to charges, acquittals, convictions, dispositions and appeals as well as information on convicted individuals; and statistics from correctional institutions provide a count of persons admitted and released with detailed information on the personal characteristics of inmates.

Unfortunately, the official statistics, whether collected at a provincial or federal level, are often marred by a lack of uniformity or standardization in the collection process, gaps in the acquisition of pertinent information and incomplete processing of the collected data. The usefulness of the official statistics is even more limited when examining the phenomenon of female offenders and their offences as many statistical programs do not necessarily publish separate information on males and females.

Traditionally, the relatively small number of female offenders, as compared to male offenders, have precluded the development of a data base extensive enough to identify issues and trends in female criminality. In attempting to follow the progression of female offenders through the criminal justice process, from the police to the courts to the institutions, the numbers diminish to such an extent that detailed statistical analyses are inappropriate. Consequently, a large portion of the data contained in the following tables is presented in terms of absolute numbers, and where percentages have been utilized caution should be employed in interpreting the significance. The statistics contained in the tables and charts were derived from Statistics Canada's annual publications of Crime Statistics, Statistics of Criminal and Other Offences, and Correctional Institution Statistics; as well as from special data made available by Statistics Canada on request. Additional information on female inmates under Federal jurisdiction was obtained from the Inmate Records System of the Canadian Penitentiary Service.

The statistical tables, charts and related narrative are grouped sequentially within three general areas: the incidence of crime (police statistics); judicial response (court statistics); and the female inmate (correctional institution statistics). Data incompatibilities, in terms of reporting procedures, scope of coverage, units of count, and definitions, prevent comparisons from being made between the statistical systems. In order to highlight specific areas, as well as maintain a necessary perspective of the female offender within the Criminal Justice System, selected comparisons have been made with statistics compiled on male offenders.

SECTION I

The Incidence of Female Crime

The extent to which women participate in criminal activity can be approximated from data contained in Statistics Canada's annual publication of Crime Statistics. The publication contains data submitted by police departments throughout Canada, and currently provides the closest indicator of the incidence of criminal activity on a national scale. Police, or crime statistics should not be interpreted as a measure of the actual amount of crime that occurs as unreported or undiscovered crime will never be reflected in official statistics. As well, it is necessary to keep in mind the methodological problems which arise when utilizing statistics which have been collected over a period of time. Such factors as variations in reporting practices, changes in police policy, procedures and/or resource allocation and revisions in legislation may contribute to quantitative differences in police response to crime which would not be readily apparent in an examination of the official statistics.

The statistics contained in tables 1.1, 1.2, and 1.3 were derived from the Crime Statistics publication, and indicate the number of persons charged by police during a given year. The number of persons charged contains some duplications, as the same individual may be charged more than once during a calendar year.

FEMALE CRIME IN THE SEVENTIES

Table 1.1 identifies the number of women charged by police for committing a criminal code offence or violating a federal statute during the five-year period 1970 to 1974. Individual offences have been combined within general groupings based on the nature of the offence. An explanation of these groupings immediately follows the table. The following comments relate to the more salient characteristics of the data contained in Table 1.1.

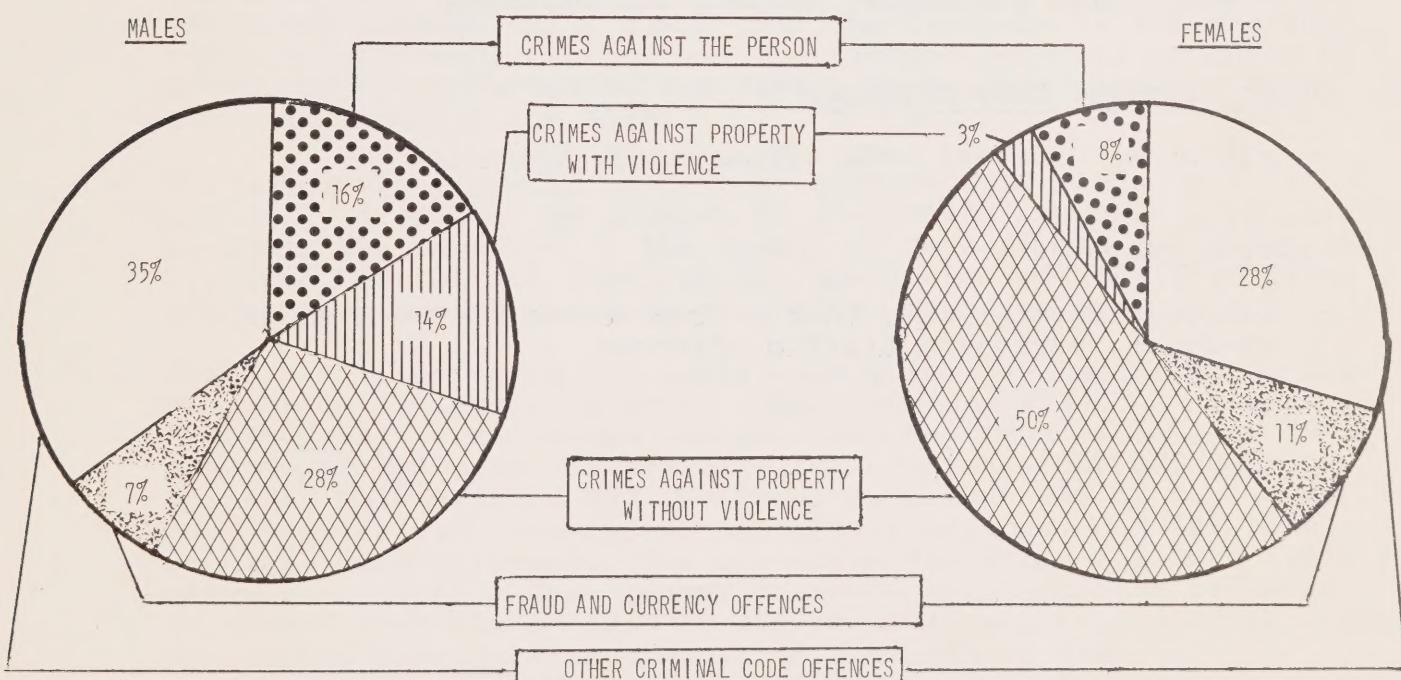

- The total number of women charged by the police for criminal code offences each year rose over the period, by 64% (from 21,425 in 1970 to 35,075 in 1974), but there has been no disproportionate increase in any one offence group.
- Offences against property without violence consistently comprise 50% of all criminal code violations. It is important to note that charges for shoplifting account for 80% of all offences against property without violence. In 1974, over 13,000 women were charged with shoplifting in Canada, thus, of the total number of women charged under the criminal code, one out of every three resulted from shoplifting.
- Violations of Federal Statutes have increased more significantly than criminal code offences; 146% over the five years. The crime statistics indicate that 80% of Federal Statute offences are violations of the Narcotic Control Act related to cannabis.
- The pattern of difference in the distribution of criminal code offence groups between males and females has remained relatively constant over the years considered. The chart accompanying Table 1.1 identifies this distribution for the year 1974. The violent offence groups, against persons and property, account for 11% of all females charged with criminal code violations while for males, such offences comprise 30%.
- A large proportion of the criminal activity of females is concentrated within those offences resulting in financial gain. Crimes against property without violence (mainly shoplifting) and fraud/currency offences (mainly bad cheques) account for 61% of all women charged with criminal code offences, while for males, such offences account for 35%.

TABLE 1.1

ADULT FEMALES CHARGED BY POLICE, BY OFFENCE GROUP, CANADA, 1970-1974

OFFENCE GROUP	1970	1971	1972	1973	1974	% CHANGE 1974/70

DIVISION
MINISTRY OF THE SOLICITOR GENERAL
NOVEMBER, 1976

DEFINITION OF OFFENCE GROUPS

Against the Person Offences

- murder, attempted murder, manslaughter, rape, other sexual offences, assault, wounding

Against Property with Violence

- robbery, breaking and entering

Against Property without Violence

- theft of motor vehicle, theft over and under, possession of stolen goods

Fraud & Currency Offences

- fraud, false pretences, forgery and uttering

Other Criminal Code Offences

- all other criminal code offences not specified

Federal Statutes

- Narcotic Control Act, Food & Drug Act and Other Federal Statutes, excluding traffic offences

THE CHANGE IN NUMBERS FROM 1964 TO 1974

Table 1.2 shows the number of men and women charged for specific offences during 1964 and 1974. Though it would not be advisable to identify crime trends or base predictions on such figures alone, it is interesting to note those areas where significant changes or variations have occurred.

- In 1964 there were ten times more men than women charged with criminal code offences, by 1974 this ratio had decreased to 6 to 1. This implies that the number of females charged with such offences is increasing at a faster rate than males which is borne out by the fact that the number of women thus charged increased 176% from 1964 to 1974 while for males the increase was 74%.
- With the exception of "rape/other sexual offences", which is predominately a male crime, the increase in the number of women charged for each criminal code offence outstripped the increase for males. The most noticeable variation occurred in fraud offences with the increase for females (306%) being five times greater than was the increase for males (59%).
- The largest increase in females charged occurred for offences against property, namely fraud (up 306%), breaking and entering (up 278%) and theft (up 276%). For males, the most significant increases (though still lower than the increase in females for similiar offences) occurred in the violent personal offences of attempted murder/wounding (up 146%), murder/manslaughter (up 140%) and robbery (up 123%).
- The excessive increase in federal statute drug violations is partially explained by changes in statistical reporting procedures, however, the increase in the number of persons charged under the Narcotic Control Act (hashish and marijuana) obviously reflects a greater usage of the drug within the Canadian population.
- Chart 1.2 illustrates the variations which have occurred in the proportion of persons charged under the four offence categories. In 1964, 50% of all women charged resulted from violations of provincial statutes and 38% were for criminal code offences. In 1974, this pattern had reversed, such that 26% of the women were charged with provincial statute violations, and 58% for criminal code offences. The situation for males followed similiar variation but to a much lesser degree - criminal code offences increased from 33% in 1964 to 40% in 1974, while provincial statute violations decreased in proportion from 54% to 44%.

TABLE 1.2
ADULTS CHARGED BY POLICE BY OFFENCE, 1964 AND 1974, CANADA

OFFENCE	1964		1974		% CHANGE 1974/1964	
	FEMALES (NO.)	MALES (NO.)	FEMALES (NO.)	MALES (NO.)	FEMALES (%)	MALES (%)

RATES OF CRIME IN THE PROVINCES

Table 1.3 contains data on the rates of males and females charged with criminal code offences in each province and territory for the years 1964, 1968 and 1972. The rates have been calculated on the basis of Statistics Canada June 1st census estimates for each year. Methodological problems arise when comparing data between geographic areas of varying socio-economic conditions and caution should be used against drawing conclusions on the basis of such figures. More appropriate use of this data may be made by examining variations within each province/territory over the time period identified.

- In the provinces of British Columbia, Saskatchewan, Ontario and Newfoundland, the rate of females charged increased 100% from 1964 to 1972. For the maritime province of New Brunswick Nova Scotia and Prince Edward Island, the rates increased more significantly, from 200% for New Brunswick and Nova Scotia to 300% for Prince Edward Island. For males, the largest increase in rate occurred in Prince Edward Island which rose 70%, from 12.7 in 1964 to 21.6 in 1972.
- The only province in which a decrease in rate occurs is Quebec where, for females the rate in 1964 was 2.2, and in 1972 the rate was 2.0; for males the rate decreased from 19.0 in 1964 to 16.5 in 1972.
- In 1964, the national rate of males charged (20.6) was ten times greater than females (2.1), yet in 1972, the male charge rate (25.8) was seven times greater than females (3.7).

SECTION II

JUDICIAL RESPONSE TO INDICTABLE OFFENCE CONVICTIONS

The data contained in the Statistics Canada court program and the publication Statistics of Criminal and Other Offences, provides more detailed information on both offenders and offences than is available from Crime Statistics. These figures relate to the results of cases which were disposed of during a given calendar year with the unit of count being the person convicted. While individuals may be charged with more than one offence during a year, the most serious offence in terms of maximum penalty or the offence for which court proceedings were carried to the furthest stage (i.e. conviction and sentence) is tabulated for each person represented on the following tables.

It is important to note that since 1969 comparable data for the provinces of Quebec and Alberta (which comprise approximately one-third of Canada's total population) have not been published under the court program of Statistics Canada. This situation resulted from the provinces conversion to a more comprehensive reporting program, thus the tables in Section II do not include the court statistics for these two provinces.

CHARGES AND CONVICTIONS

- The rate of conviction (percent convicted of those charged) for males and females charged with indictable offences has remained relatively constant during the five years 1968-1972.
- The largest variation between the conviction rates of males and females occurs in relation to "offences against property with violence". Over the five years 90% of all males charged with violent property offences were convicted while for females, the conviction rate was 75%.
- For total criminal code offences, the conviction rate for males and females is identical, an average of 88% over the five year period.
- The lowest rate of conviction for males and females occurs within the offence group "against the person" and federal statute violations.

Statistics of Criminal and Other Offences
(85-201)

PREPARED BY: Information Systems & Statistics Division
Ministry of the Solicitor General
November, 1976

DEFINITION OF OFFENCE GROUPS - COURT STATISTICS

Against the Person Offences

- murder, attempted murder, manslaughter, rape, other sexual offences, assault, abduction/kidnapping, criminal negligence, other offences against the person.

Against Property With Violence

- robbery, extortion, breaking and entering.

Against Property Without Violence

- theft, fraud, false pretences, forgery, possession of stolen goods.

Other Criminal Code Offences

- all other criminal code offences not specified.

Federal Statutes

- Narcotic Control Act, Food & Drug Act and all other Federal Statutes excluding traffic violations.

SENTENCING PATTERNS

Tables 2.2(A), 2.2(B), 2.3, 2.4 and the accompanying charts show the court dispositions of persons convicted for indictable offences during the years 1968 to 1972, inclusive. The offence groups are the same as were defined for table 2.1. The relatively large number of "not stated" dispositions for the 1972 data is a result of the use of preliminary figures supplied by Statistics Canada.

- Historically, the use of non-incarcerative dispositions for criminal code offence convictions is more frequently used with females than with males, and conversely, a sentence of federal incarceration is proportionately used more often for males than for females. In 1972, 4% (1691) of all males convicted of criminal code offences were sentenced to federal penitentiaries, while for females, less than 1% (42) received federal terms of imprisonment.
- Over 80% of all females convicted of criminal code offences received non-incarcerative dispositions, most often fines or suspended sentence with probation. As a large majority of females are convicted for shoplifting and fraud offences terms of imprisonment are not often warrented.
- The sentencing pattern for federal statute convictions is very similiar for males and females, with the use of non-incarcerative dispositions increasing from 37% of those convicted in 1968 to 52% in 1972.
- A sentence of federal incarceration is more often used for females convicted of federal statute violations, primarily in the case of women convicted under the Narcotic Control Act (NCA) for importing and trafficking, than for any other offence group. The largest percentage of males sentenced to federal incarceration occurs for conviction of offences against property with violence, mainly robbery and breaking and entering.
- Table 2.3 provide a regional distribution of the sentencing pattern for women convicted of Narcotic Control Act violations. Over the five years examined, convictions under the NCA comprise 90% of all females convicted under the Federal Statute category. Most of the convictions occurred with the Province of Ontario and British Columbia.
- The use of non-incarcerative dispositions has increased from 36% of all females convicted of NCA Violations in 1968 to 52% in 1972; provincial institutional sentences have decreased in a corresponding proportion.
- Table 2.4 identifies the distribution of sentences received by males and females convicted of indictable offences from 1968 to 1972. In the interpretation of this table it is important to keep in mind the relative difference in the offence patterns of males and females.

AGES OF FEMALES CONVICTED OF INDICTABLE OFFENCES

- Over the five years, 1968 to 1972, the age distribution of females convicted of indictable offences has shifted slightly. In 1968, 37% of the women convicted were 30 years or older, by 1972 the proportion of this age group had decreased to 28%, while the other two categories increased in proportion from 27% to 29% for 20 to 29 years, and from 18% to 23% for the youngest age group 16 to 19 years.
- From the table, no patterns are discernible, particularly when such a large number of cases fall within the "not stated" category.

SECTION III

THE FEDERAL FEMALE INMATE

The large majority of female offenders sentenced to institutions receive sentences of less than two years and serve time within provincial correctional facilities. As each province tends to maintain record keeping or statistical information systems designed to meet its own specific needs, there exists limited, if any, compatibility or standardization between the systems in the individual provinces. An attempt to collect compatible data or statistical information at the provincial level would be an extensive undertaking, and as the main focus of this report concerns the female inmates within federal jurisdiction, the data contained within this section relates to women who have been sentenced to terms of incarceration under federal jurisdiction. In most cases, such sentences would be for terms of two years or more. Admissions for parole violation is often an exception to this general rule.

The figures in the following tables and charts were derived from two sources, Statistics Canada's Correctional Institution Statistics, and the Inmate Records System maintained by the Canadian Penitentiary Service. The data is based on women admitted to federal penitentiaries during a given year for whom admission records were submitted to the Canadian Penitentiary Service. The increased use of federal-provincial inmate exchange agreements, which allow for certain inmates who receive a federal term of imprisonment to serve such sentences within provincial correctional facilities, has resulted in problems for the data collection and record-keeping systems at the federal level. Thus, the following tables excludes the unknown number of women who came under federal jurisdiction but who are incarcerated in provincial institutions under a contract for services. Although the utility of the statistics would be enhanced if such data were obtainable, until this occurs, one must be cautioned against drawing conclusions or identifying trends on the basis of this restricted data.

THE OFFENCE AND SENTENCE

Table 3.1 and chart 3.1 relate to the sentence length of women sentenced to federal terms of incarceration. Table 3.1 contains figures on the sentence length of women admitted to penitentiary for various offences for each year 1970 to 1974, inclusive. Chart 3.1 derived from a different source, relates to a different population, namely the inmate population of the Prison for Women as of December 31st, 1971 to 1975. The chart identifies the proportion of the inmate population serving sentences within the sentence categories provided.

From Table 3.1 the most significant trend relates to the increase in the number of women admitted to penitentiary for Narcotic Control Act violations, which in recent years accounts for 50% of all admissions. The relatively long sentences received by women admitted for NCA offences, particularly those convicted of trafficking or importing, are related to the minimum sentencing provisions contained in the Criminal Code.

- From chart 3.1, it is evident that female inmates of the Prison for Women tend to serve sentences within the range of 2 to 4 years, or sentences from 5 to 15 years. The proportion of women serving long sentences, over 15 years has remained relatively constant at approximately 9%.
- Chart 3.2 represents the variation in the institution population of the Prison for Women during the years 1964 to 1975. Chart 3.3 identifies the population movement of the same institution, in terms of admissions and releases.

PREVIOUS INSTITUTIONAL SENTENCES

Table 3.2 shows the previous institutional experience of the offenders admitted to the Prison for Women during the period 1969 to 1973 for specific offences. Also indicated is the proportion or percentage of females admitted for each offence category.

- The number of women admitted to penitentiary who have not served time in either provincial or federal institutions has increased from 1969 to 1973. This increase in first commitments is largely related to the increase in the number of women admitted for NCA offences. In 1973, over 50% of the women admitted to penitentiary had not served a previous sentence in a correctional facility.
- Of the women who have served previous institutional sentence (s) an almost equal proportion have served provincial sentences as have those who have served provincial and federal sentences.

FEMALES RELEASED FROM PENITENTIARY

Table 3.3 indicates the type of release and the length of time served by inmates released from federal penitentiary during the period 1970 to 1975. It should be noted that the 'amount of time served' is directly influenced by such factors as offence and sentence, which is not necessarily apparent from this table.

- A relatively small number of females released from penitentiary have served more than 3 years. In 1974, 5 of the 116 inmates released from federal penitentiaries had served three years to five years and no inmate had served longer than 5 years. The majority of women released after serving time of less than 1 year were transferred to provincial institutions to complete serving their sentence.

TABLE 3.3
TIME SERVED BY FEMALES RELEASED FROM FEDERAL INSTITUTIONS 1970-74

TIME SERVED BY YEAR RELEASED	TYPE OF RELEASE						TOTAL RELEASED
